DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 8-9 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Quase (U.S. 3,674,687). As shown in e.g. figure 1, Quase teaches a transfer connection between a pretank 60 and an aerating reactor tank 140. The pre-tank is provided with an overflow 56 [as in claim 1]. The pre-tank includes a "cover plate" (valve gates 94, 86 and associated walls) that reduces turbulence within the tank [as in claims 8-9]. The method of Quase teaches all the steps of claim 13 including batch treatment and transfer between the tanks.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/758,152 Page 3

Art Unit: 1723

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 4. Claims 1, 3, and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koulovatos et al. (U.S. 3,679,053) in view of Quase. Koulovatos teaches a pre-tank (tank A) and a reactor tank (tank B) and connections therebetween for batch treatment. Koulovatos doesn't teach a storm overflow, but such is taught by Quase as expanded above [as in claims 1 and 13]. It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the overflow of Quase in the invention of Koulovatos, since Quase teaches the benefit of preventing overload of the system. Koulovatos doesn't teach a plurality of pretanks having aeration equiptment. However, Quase teaches a plurality of storage tanks 140 (see col. 2, lines 10+) having respective inlets and outlets to alternating flow to a final treatment stage [as in claims 3, 11-12]. It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the storage tanks 140 of Quase as pre-tanks in the invention of Koulovatos, since Quase teaches the benefit of controlling the rate of flow to downstream treatment and the benefit of aeration pre-treatment before a final treatment.
- 5. Claims 2, 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koulovatos in view of Quase and in further view of White (U.S. 4,839,057). The modified Koulovatos teaches a level sensor and aerator in the pre-tank but doesn't teach a stirrer and aerator that responds (switches off) to a lever sensor therein. However, such is taught by White. White

Application/Control Number: 10/758,152 Page 4

Art Unit: 1723

teaches a stirrer in an aeration tank that shutoffs off after filling to a certain level (col. 2, lines 8-24). It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the aforementioned elements of White in the invention of the modified Koulovatos, since White teaches the benefit of allowing contaminants to settle to the bottom.

6. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Koulovatos in view of Quase and in further view of the German Reference (DE 10214305 A1). '305 teaches the storm overflow to include a weir (figure 1). It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the weir in the pre-tank of the modified Koulovatos, since '305 teaches the benefit of a means for removing excess stormwater flow from the system to prevent overloading thereof.

Priority

7. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in the United Kingdom on 1-17-2003. It is noted, however, that applicant has not filed a certified copy thereof as required by 35 U.S.C. 119(b).

8. Contact Information:

Art Unit: 1723

• Examiner Mr. Terry K. Cecil can be reached at (571) 272-1138 at the Carlisle campus in Alexandria, Virginia for any inquiries concerning this communication or earlier communications from the examiner. Note that the examiner is on the increased flextime schedule but can normally be found in the office during the hours of 8:30a to 4:30p, on at least four days during the week M-F.

- Wanda Walker, the examiner's supervisor, can be reached at (571) 272-1151 if attempts to reach the examiner are unsuccessful.
- The Fax number for this art unit for official faxes is (571) 273-8300.
- Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
